

## Sumas y restas de enteros y fracciones

### Solución

\* Realiza las siguientes fracciones y simplifica siempre que puedas:

$$4 + \frac{1}{2} = \frac{8+1}{2} = \frac{9}{2}$$

$$22 - \frac{64}{4} = \frac{88-64}{4} = \frac{24}{4} = 6$$

$$5 + \frac{6}{3} = \frac{15+6}{3} = \frac{21}{3} = 7$$

$$\frac{7}{5} + 3 = \frac{7+15}{5} = \frac{22}{5}$$

$$\frac{5}{4} + 2 = \frac{5+8}{4} = \frac{13}{4}$$

$$\frac{210}{5} - 16 = \frac{210-80}{5} = \frac{130}{5} = 65$$

$$9 - \frac{3}{4} = \frac{36-3}{4} = \frac{33}{4}$$

$$\frac{40}{13} - 2 = \frac{40-26}{13} = \frac{14}{13}$$

$$\frac{15}{2} - 2 = \frac{15-4}{2} = \frac{11}{2}$$

$$10 - \frac{5}{3} = \frac{30-5}{3} = \frac{25}{3}$$

$$\frac{20}{3} - 6 = \frac{20-18}{3} = \frac{2}{3}$$

$$\frac{19}{5} - 3 = \frac{19-15}{5} = \frac{4}{5}$$

$$6 - \frac{16}{5} = \frac{30-16}{5} = \frac{14}{5}$$

$$18 - \frac{110}{8} = \frac{144-110}{8} = \frac{34}{8} = \frac{17}{4}$$

$$7 + \frac{26}{4} = \frac{28+26}{4} = \frac{54}{4} = \frac{27}{2}$$

$$16 - \frac{15}{2} = \frac{32-15}{2} = \frac{17}{2}$$

$$20 + \frac{10}{6} = \frac{120+10}{6} = \frac{130}{6} = \frac{65}{3}$$

$$\frac{31}{5} - 6 = \frac{31-30}{5} = \frac{1}{5}$$

$$\frac{70}{9} - 7 = \frac{70-63}{9} = \frac{7}{9}$$

$$\frac{4}{9} + 5 = \frac{4+45}{9} = \frac{49}{9}$$
